

# International Conference

## Nature-oriented Flood Damage Prevention Planning, Evaluation and Communication

**nofdp IDSS - an interactive  
planning and communication  
software**

## Part 1: Introduction

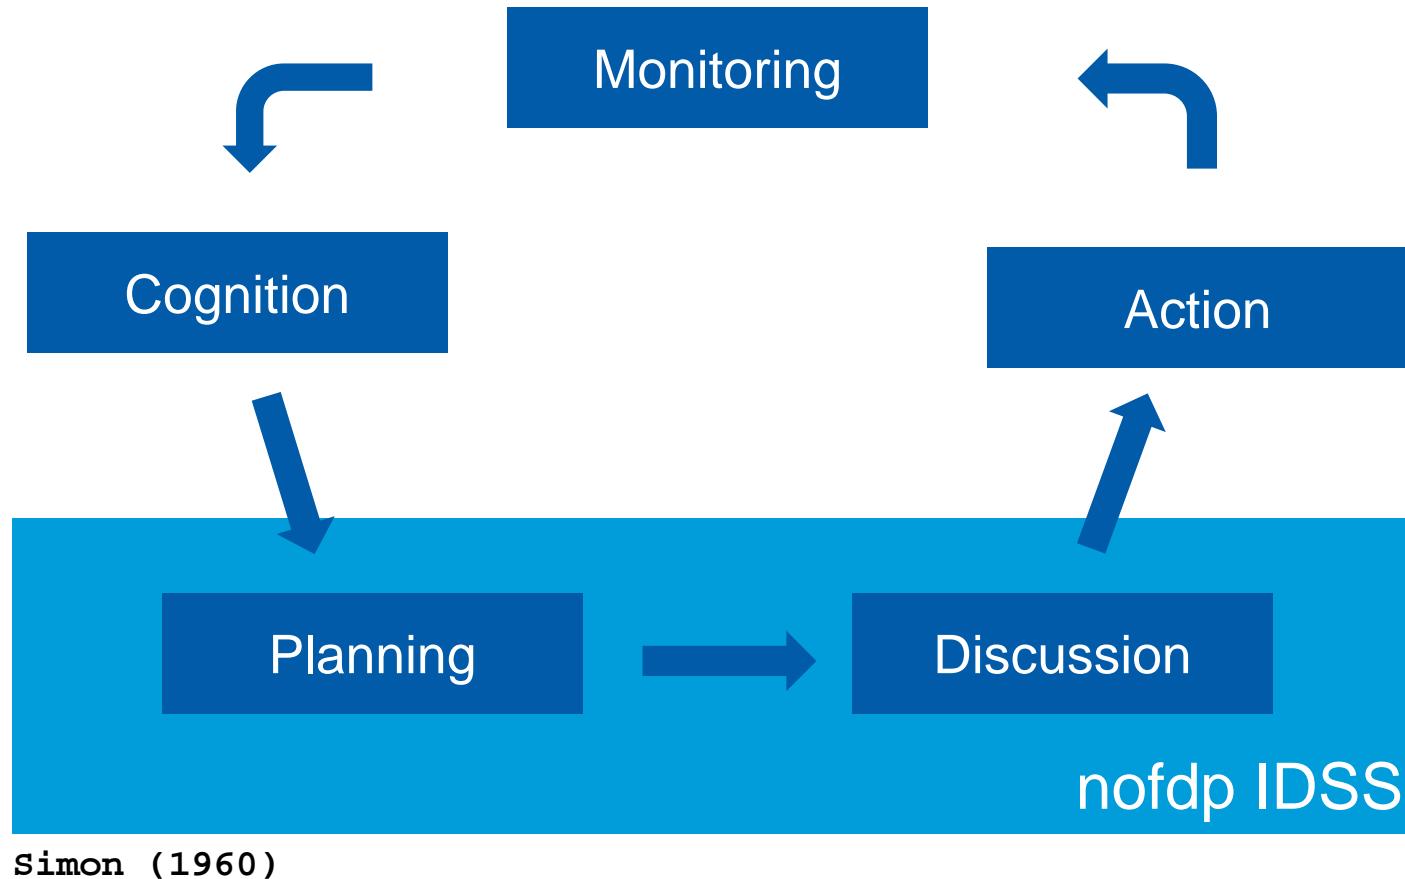

Christoph Hübner

## Characteristics of Decision Support Systems

- Support for decision makers in semi-structured and unstructured problems
- Support individuals and groups
- Support for interdependent or sequential decisions
- Support variety of decision processes and styles
- DSS should be adaptable and flexible
- DSS should be interactive and provide ease of use
- Ease of development by (modification to suit needs and changing environment) end users ↗
- Model-, communication-, data-, document-, knowledge-driven

## Decision Process

## IDSS requirements

- Reliable Results
- Simple and clear demonstration of results
- Not make decisions, but deliver information
- Multicriteria Evaluation
- Support discussions
- Maximum on transparency
- Model-, communication- and data-driven
- Standalone
- Free of charge

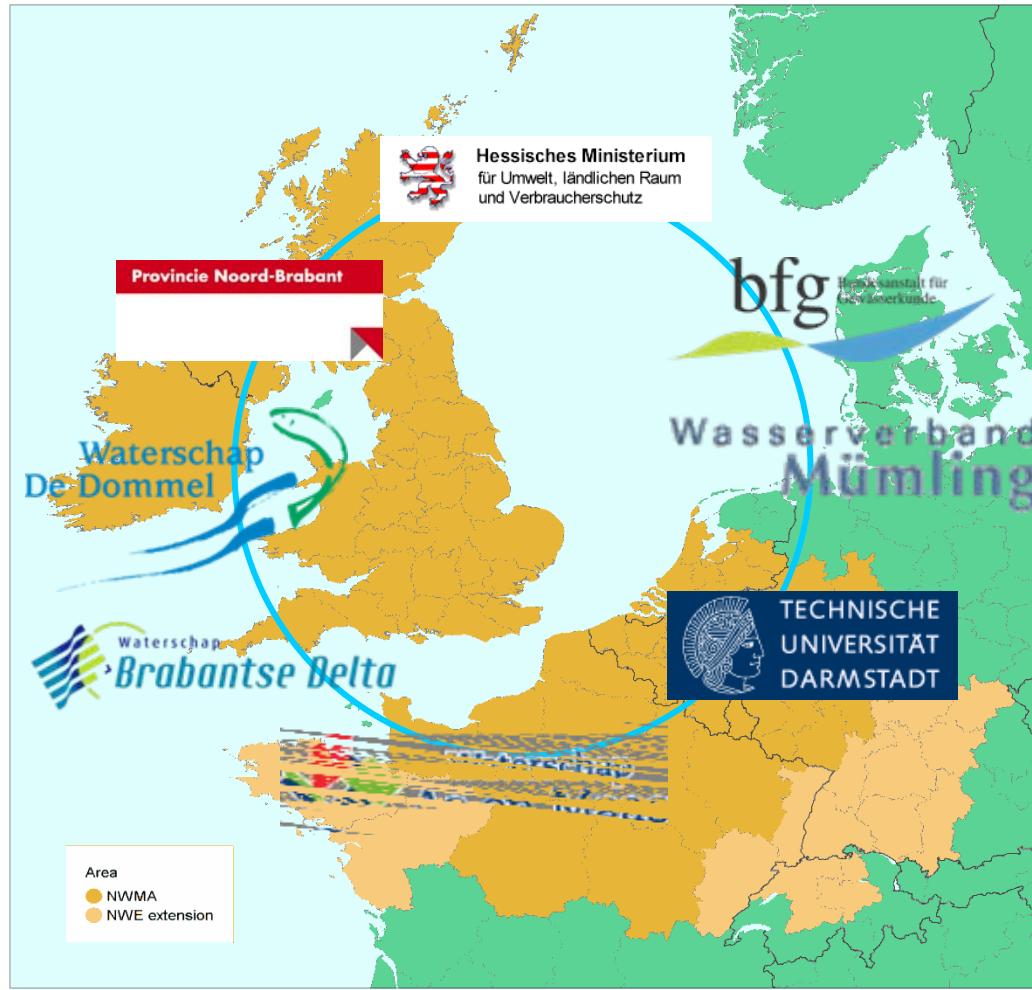

# IDSS Concept Development

TECHNISCHE  
UNIVERSITÄT  
DARMSTADT

Implemented by:

# Objective

TECHNISCHE  
UNIVERSITÄT  
DARMSTADT

**The overall objective of the project is  
to:**

**develop a computer based decision support  
system**

that provides the information required,  
as well as suitable models and methods

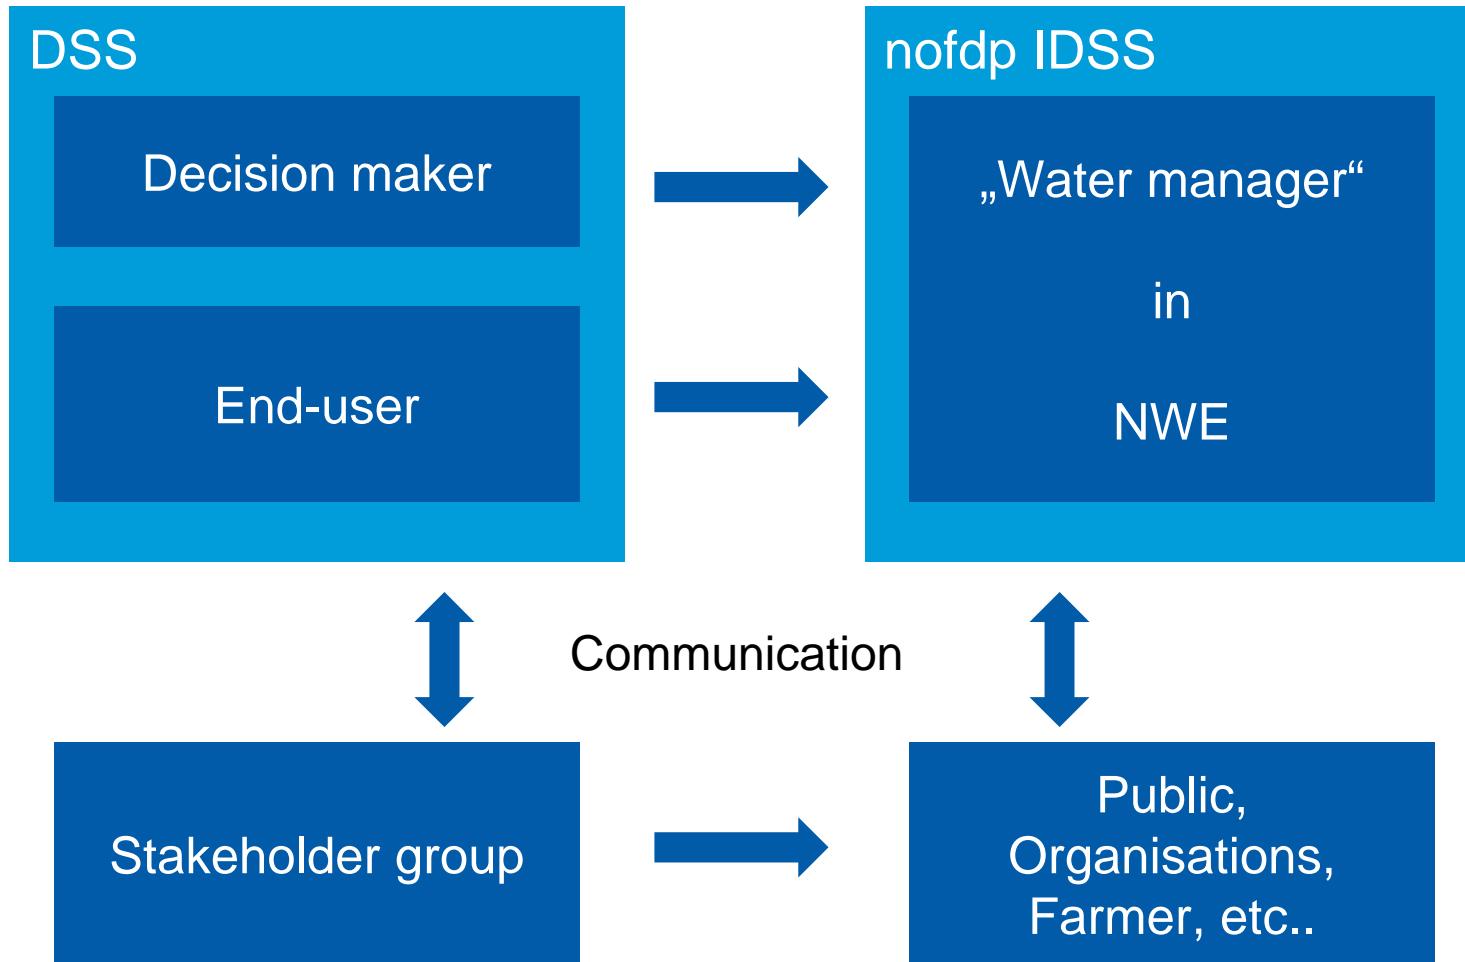

**to demonstrate the expected function  
of flood prevention measures / projects**

on different scales, in an integrated temporal

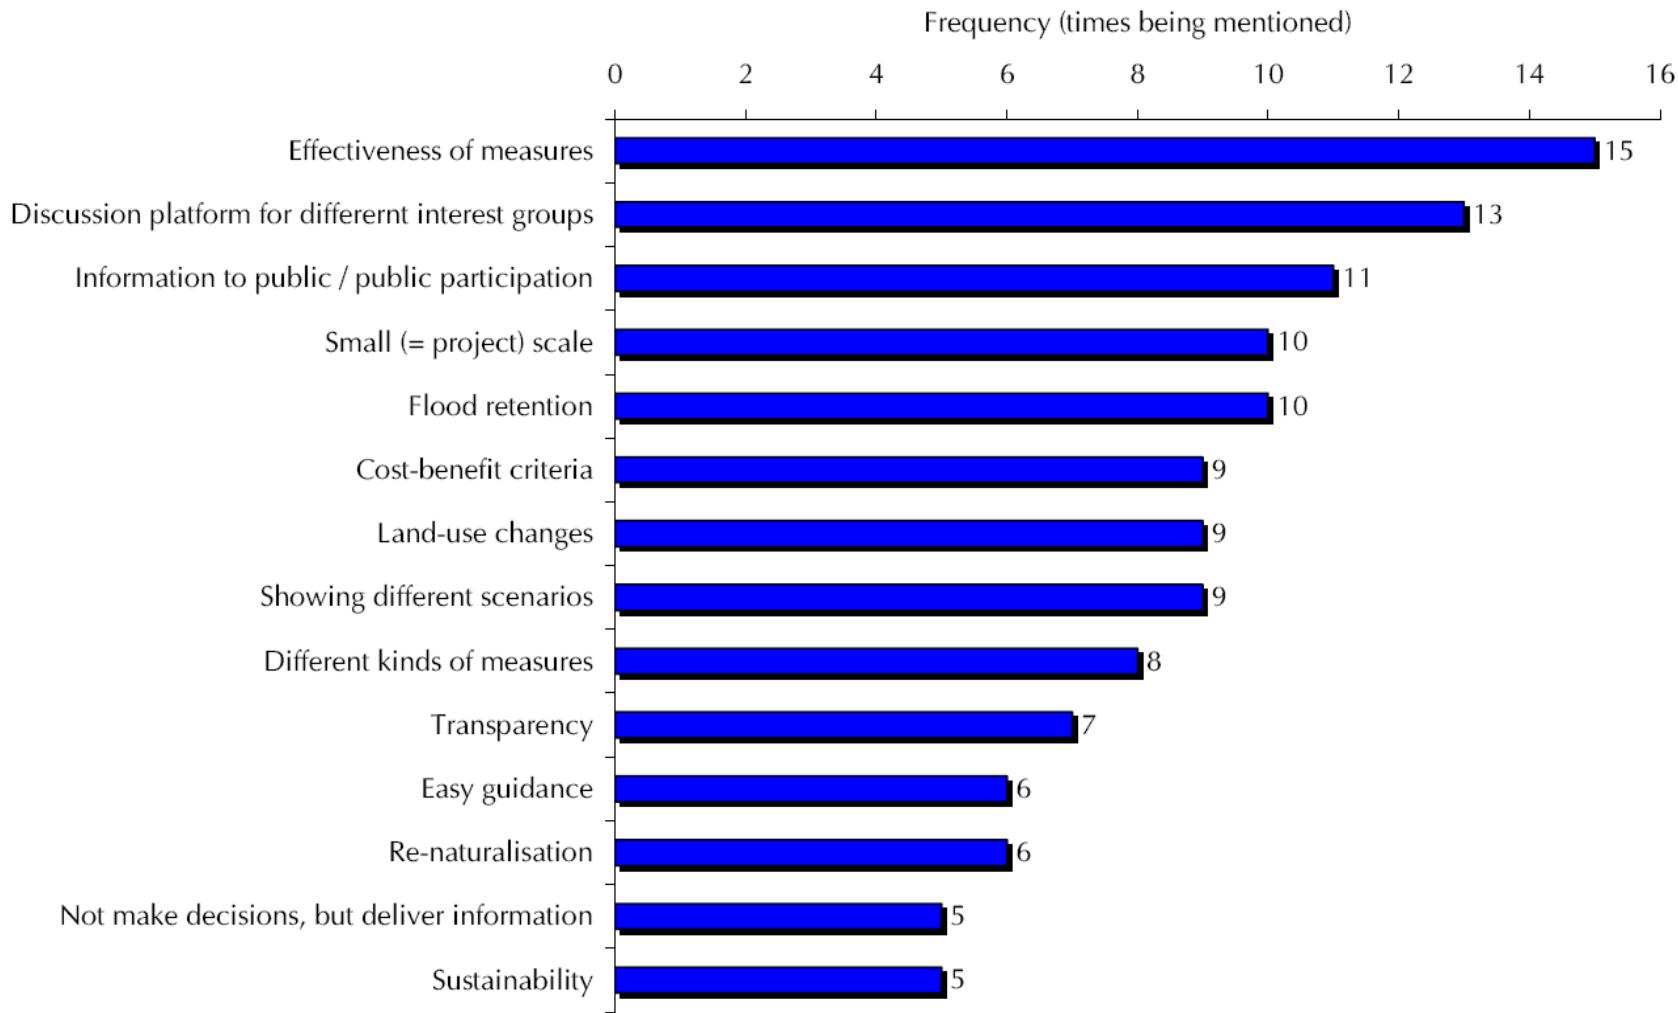

# Stakeholder and user

TECHNISCHE  
UNIVERSITÄT  
DARMSTADT

# End-user demands

# Measures

| Category  | Sub-category                  | Measure   |
|---|-------------------------------|---|
| Constructive Measures                               | Flood retention               | Polder  |
|   |                               | Retarding basin (controlled and uncontrolled)                                 |
|   |                               | Excavation works within floodplains   |
|   |                               | Lowering floodplains  |
|   | Hydraulic conveyance capacity | Bank recession and –fill up   |
|   |                               | Change of bottom slope or level   |
|   |                               | Obstacles and line-structures on floodplains                                  |
|   |                               | Diversion flood discharge   |
|   |                               | Weirs   |
|   | Activation of retention area  | Relocation of dykes   |
|   |                               | Earth walls in the valley   |
|   | Flood protection              | Construction of dykes, increasing dyke height                                 |
|   |                               | Mobile walls for local flood protection                                       |
| Measures of nature conservancy and spatial planning | Flood retention               | Ecological flooding of floodplains and polders                                |
|   | Hydraulic conveyance capacity | Establishment of buffer strips with free vegetation succession on river banks |
|   |                               | Meandering of river course (controlled and uncontrolled)                      |
|   | Activation of retention area  | Adapted forest management   |
|   |                               | Forest development on floodplains (controlled and uncontrolled)               |
|   |                               | Adapted cultivation on floodplains  |
|   |                               | Zoning plan modifications   |
|   | Flood protection              | Urban land use planning -precautionary measures against flood damage          |

# Conclusions

TECHNISCHE  
UNIVERSITÄT  
DARMSTADT

- Decision Support for planning of flood control measures and variants
  - The nofdp IDSS is transferable to other catchments, up to 50 km length
  - Existing and therefore validated data can be used by the system
  - Information and data can be prepared transparent
  - Interactive planning and decision process is supported
  - Planning variants can be evaluated and discussed
  - Modular structured, for interdependent or sequential decisions
- Version 0.9 ready, Version 1.0 in a few weeks

# nofdp IDSS: The Five Headed Monster?

# Procedure of Using the nofdp IDSS

# Outcome of 2nd user workshop, Cologne 2006

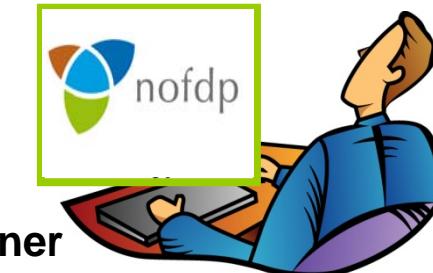

# User Profiles and Tasks

## Interactive Planning, Evaluation and Communication

User with basic knowledge  
concerning GIS and modeling.  
Familiar with Office, Internet,....

**Planner  
Project Manager**

## Project Setup and Analysis

Experienced user in processing of  
geodata and modeling  
(hydraulic and environmental)

**Expert**

# IDSS User Interface: Navigation

**nofdp IDSS**

File Window Help Search Run

Project: Mülling - Example Project

**PROJECT SETUP**

- Geodata Import
- Cross Section Manager
- Time Series Manager
- Flow Network Setup

**ANALYSIS TOOLS**

- ISAR Web
- ISAR Application
- Vegetation Suitability
- vWater Storage Suitability

**INTERACTIVE PLANNING**

- Conflict Detection
- Variant Manager
- Flood Risk
- Measure Construction
- Hydraulic Computation
- Inundation Duration

**EVALUATION**

- Ranking
- Rating
- Cost-Effectiveness Analysis
- Assessment Manager
- Value Benefit Analysis

**COMMUNICATION**

- Screenshot Manager
- Report Manager
- Google Earth (TM) Interface
- Export Manager

**Conflict Detection**

Provides an overview on possible conflicts and existing restraints as well as opportunities for water storage and natural development at a regional scale by overlaying topical maps. Choose a conflict detection from the catalog of predefined items or define a new conflict detection.

Use the results as background information for "Measure Construction."

**Conflicts**

**Corine vs. Inundation Area**

**Conflict: Corine vs. Inundation Area**

| Category          | Corine     | Inundation Area          |
|-------------------|------------|--------------------------|
| Geodata Set       | + CORINE   | + Inundation Area HQ 100 |
| Dataset Attribute | COR_TXT_00 | INUNDATION               |

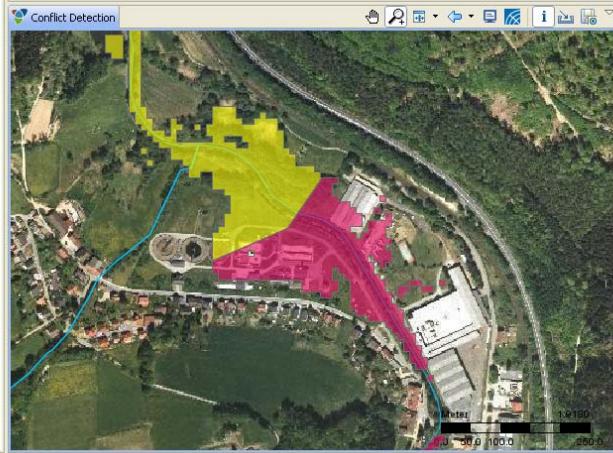

Determine Combinations of Conflict Attributes

**List of Conflicts:**

| Land-Use (Corine)   | Inundation Area | Conflict  |
|---|-----------------|-----------|
| Discontinuous urban fabric                                  | inundated       | high      |
| Industrial or commercial units                              | inundated       | very high |
| Non-irrigated arable land                                   | inundated       | medium    |
| Pastures  | inundated       | low       |
| Complex cultivation patterns                                | inundated       | medium    |
| Land principally occupied by agriculture, with significa... | inundated       | low       |
| Coniferous forest   | inundated       | low       |
| Mixed forest  | inundated       | low       |

# IDSS User Interface: Expert vs. Planner

## „fat“ Expert

The screenshot shows a complex user interface titled "Project: Mümling - Example Project". It is organized into several sections:

- PROJECT SETUP**: Geodata Import, Cross Section Manager, Time Series Manager, Flow Network Setup.
- ANALYSIS TOOLS**: ISAR Web, ISAR Application, Vegetation Suitability, Water Storage Suitability.
- INTERACTIVE PLANNING**: Conflict Detection, Variant Manager, Flood Risk; Measure Construction, Hydraulic Computation, Inundation Duration.
- EVALUATION**: Ranking, Rating, Cost-Effectiveness Analysis; Assessment Manager, Value Benefit Analysis.
- COMMUNICATION**: Screenshot Manager, Google Earth (TM) Interface; Report Manager, Export Manager.

## „thin“ Planner

The screenshot shows a simplified user interface titled "Project: Mümling - Example Project". It is organized into several sections:

- INTERACTIVE PLANNING**: Conflict Detection, Variant Manager, Flood Risk; Measure Construction, Hydraulic Computation, Inundation Duration.
- EVALUATION**: Ranking, Rating, Cost-Effectiveness Analysis; Assessment Manager, Value Benefit Analysis.
- COMMUNICATION**: Screenshot Manager, Google Earth (TM) Interface; Report Manager, Export Manager.

# Data Management

## supported data types

- Geodata
  - SHAPE data (SHP format)
  - Raster data (ASC format)
  - Image data, geo-referenced (e.g. orthophotos, topographical base maps)
    - GeoTIFF
    - TIFF with World file (TFW)
    - JPEG with World file (JGW, JPW)
- Cross Section data as special geodata
  - ASCII format (XYZ format)
- Time series data
  - ASCII format (selectable delimiter and date format)
  - ZML format (internal time series format, XML)

## data categories

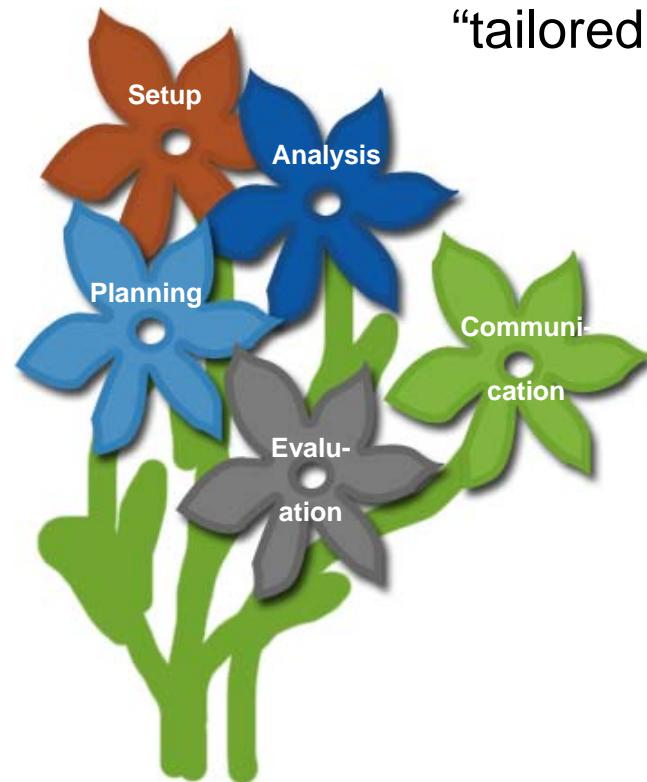

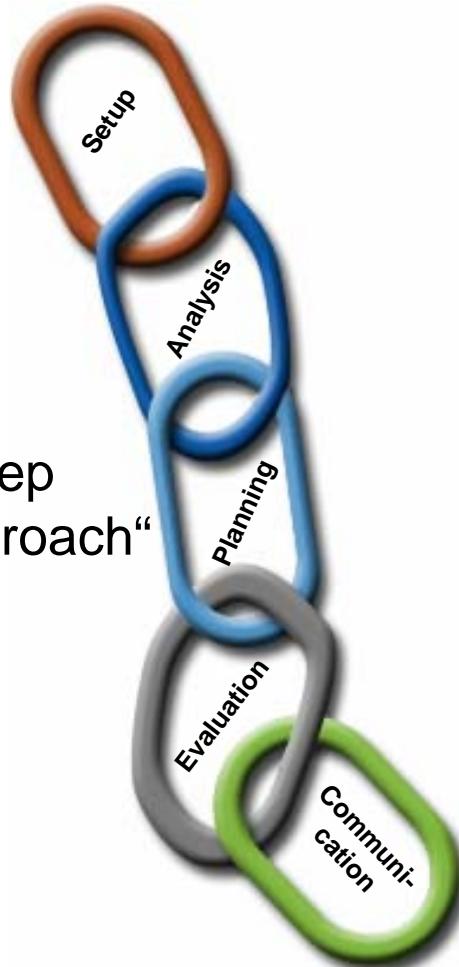

- nofdp category
- nofdp verified image file
- nofdp verified raster file
- nofdp verified shape file
- user category
- image file
- raster file
- shape file

# How to Get Started

step by step  
“workflow approach”

“tailored approach”

# Use Case No. 1: Analysis of Hydromorphological Conditions

nofdp IDSS

File Window Help Search Run

Project: Mülling - Example Project

**PROJECT SETUP**

- Geodata Import
- Cross Section Manager
- Time Series Manager
- Flow Network Setup

**ANALYSIS TOOLS**

- ISAR Web
- ISAR Application**
